Host Findings Executive Summary

The Host Findings Executive Summary Report provides operations teams a snapshot of risk based on selected assets. The Vulnerability by Severity chart displays a count of all vulnerabilities identified in the selected assets, starting with the total count of the most critical vulnerabilities. The Operating System Summary chart enumerates the number of assets detected for each of the listed operating systems. The OS Defined column provides a total count of all devices where the operating system could be identified. This number includes a sum of the previously listed operating systems, but may also include other, less common operating systems. The Missing OS column identifies the number of assets for which the operating system could not be identified. The Summary of Selected Assets table provides a list of assets (up to 10,000 assets) sorted by the Asset Criticality Rating (ACR). Organizations use this report to collect a quick list of assets to understand the criticality of the selected assets.

Vulnerability By Severity

Critical	High	Medium	Low	Info	All
1	0	1	0	0	2

Operating System Summary

Windows Servers	Windows Workstation	macOS	Linux	Network	OS Defined	Missing OS
0	0	0	1	0	1	0

The Summary of Selected Assets table lists details about the selected assets (up to 10,000 assets), starting with the assets that have the highest Asset Criticality Rating (ACR). An asset's ACR is expressed as an integer from 1 to 10, with higher values corresponding to the assets that are the most critical to the business. The Last Authenticated Scan time indicates the last time an authenticated scan was run against the asset. If this field is blank, no authenticated scans have been run against the asset, indicating incomplete vulnerability data. The TCP and UDP fields note the total number of these services that were detected on the asset.

Summary of Selected Assets

Asset ID	First Value of Asset Name	First Value of Asset Aes Score	First Value of Asset Acr Score	First Value of Asset last licensed scan time	First Value of Asset Last Authenticated Scan Time	TCP	UDP
